## EES1119 – Quantitative Environmental Analysis

### Dates

Tuesdays 1-4pm. From September 14<sup>th</sup> to November 30<sup>th</sup>, 2021

### Lecturer

Carlos Alberto Arnillas

Email: [carlos.arnillasmerino@mail.utoronto.ca](mailto:carlos.arnillasmerino@mail.utoronto.ca)

Office hours: TBD

### Teaching assistant

Coreen Daley

Email: [c.daley@mail.utoronto.ca](mailto:c.daley@mail.utoronto.ca)

Office hours: TBD (either Mondays 5-6, or Tuesdays 5-6)

### Description

This course provides an introduction to the field of ecological statistics using R. Students will become familiar with several methods of statistical analysis of categorical and multivariate environmental data, and with the critical aspects needed to understand them, such as assumptions, underlying distribution, and decision criterion if relevant. The course will provide a comprehensive presentation of some of the most commonly used methods: analysis of variance and regression analysis, and basic concepts of ordination (principal component & non-metric multidimensional scaling) methods and Monte Carlo and Bayesian approaches. Emphasis will be placed on how these methods can be used to identify significant cause-effect relationships, detect spatiotemporal trends, and assist environment management by elucidating ecological patterns (e.g. assessment of atmospheric conditions based on pollutants, experimental identification of the role of fertilizers on natural settings).

Along the course, the students will manipulate and analyze the data using R. R is a programming language often used in environmental sciences and other academic and non-academic settings to perform statistical analysis. It is a free software with the active support of a huge community in the environmental sciences.

## Learning outcomes

1. Students should be able explain the critical aspects of a statistical inference method (assumptions, core underlying distribution, statistic being tested and how it related to real data)
2. Students will be provided with the information to explain linear regressions as representation of data generation models and communicate their validity in specific conditions.
3. Students will be provided with tools to implement data validation and quality control strategies in their common practice.
4. Students should be able to integrate, summarize and share critical results of their analyses using R.
5. Students will have the opportunity to contextualize and share their expected learning process in terms of foundational knowledge, applications, integration, human dimension, caring, learning how to learn.

## Course Grades

Three assignments (each 30 %)	90%
Participation	10%

The evaluation will be carried out in accordance with the Graduate Grading and Evaluation Practices Policy (and how that policy is interpreted and applied in this Dept.)

<http://www.governingcouncil.utoronto.ca/Assets/Governing+Council+Digital+Assets/Policies/PDF/grading.pdf>

## Meetings

Zoom address:

<https://utoronto.zoom.us/j/85656669249> (meeting ID: 856 5666 9249)

Tuesdays Sep 14<sup>th</sup> to Nov 30<sup>th</sup>. 1-4 pm

## Prerequisites

No prior knowledge of environmental science or statistics is required.

## Readings

The required textbook for this course is:

N.J. Gotelli and A.M. Ellison (2018). A Primer of Ecological Statistics. Oxford University Press. New York, US.

## Accessibility

Students with diverse learning styles and needs are welcome in this course. In particular, if you have a disability/health consideration that may require accommodations, please feel free to approach me and/or the AccessAbility Services Office as soon as possible. If you require accommodations for a disability or have any accessibility concerns about the course, or course materials, please contact the UTSC Accessibility Services as soon as possible.

<https://www.utsc.utoronto.ca/ability/welcome-accessability-services>

We also suggest you also refer to the following University of Toronto Scarborough Library link

<http://utsc.library.utoronto.ca/services-persons-disabilities>

The sooner you let us know your needs the quicker we can assist you in achieving your learning goals in this course.

## Verification of illness

A **Verification of Illness (also known as a “doctor’s note”)** is temporarily not required. Students who are absent from academic participation for **any reason** (e.g., COVID, cold, flu and other illness or injury, family situation) and who require consideration for missed academic work should report their absence through the online absence declaration. The declaration is available on **ACORN under the Profile and Settings menu**. Students should also advise their instructor of their absence. Visit [COVID-19 Information for University of Toronto Students](#) page on the Vice-Provost, Students website for information on this and other frequently asked questions.

## Emergency planning

Students are advised to consult the [university's preparedness site](#) for information and regular updates regarding procedures relating to emergency planning.

## Plagiarism

University of Toronto Code of Behaviour on Academic Matters states that "it shall be an offence for a student knowingly: to represent as one's own any idea or expression of an idea or work of another in any academic examination or term test or in connection with any other form of academic work, i.e., to commit plagiarism."

For accepted methods of standard documentation formats, including electronic citation of internet sources please see the UofT writing website at <http://advice.writing.utoronto.ca/using-sources/documentation>.

The full Code of Behaviour regulations could be found from consulting

<https://www.sgs.utoronto.ca/policies-guidelines/academic-integrity-resources/>

Writing and English language

You can find support at [English Language and writing support at University of Toronto](#) or the [Centre for Teaching and Learning](#) at UTSC (see also <https://uoft.me/AcademicLearningSupport>).
