

Introduction to Green Chemistry (CHMD89H) – Fall 2013

University of Toronto at Scarborough

Welcome to CHMD89! This course will introduce you to the growing field of green chemistry – an interdisciplinary approach to chemistry that strives to develop environmentally benign chemical reactions and processes. The course will begin by introducing the twelve principles of green chemistry followed by the use of green chemistry metrics for quantifying ‘greenness.’ In this context, we will move on to explore major areas of green chemistry research including alternative solvents, catalysis and renewable feedstocks. Examples from industry and from the current literature will be used to reinforce the material and highlight recent advances. The topics covered will be multidisciplinary in nature and will draw on aspects of organic, inorganic and polymer chemistry. Prerequisites for this course include CHMB31 and one of either CHMC41 or CHMC42; CHMC31 is recommended, but not required.

Please take a few minutes to read through this document. It contains important information that will help ensure your success in this course.

Instructor:

Dr. Effie Sauer

SW640

Email: esauer@utsc.utoronto.ca

Office Hours: Mondays 1:30-3:00 pm

Wednesdays 10:30-12:00 pm

Thursdays 1:30-3:00 pm

Lecture Schedule:

Tuesdays 2-5 pm in MW 223

Website:

CHMD89 maintains a Blackboard web space which archives a variety of course-related information including: class announcements, assigned readings, grades, discussion board posts, contact information and links to outside resources. In addition, class emails will periodically be sent via Blackboard. ***In order for you to receive these emails, you must have a valid “utoronto.ca” email account registered with ROSI.***

Method of Evaluation:

Your grade in this course will be calculated as follows. More detailed descriptions of each item can be found below.

Problem Sets	30%
Writing Assignment	35%
Presentation	10%
Course Participation	10%
Final Exam	15%
Total	100%

Problem Sets:

There will be three problem sets due throughout the semester, each worth 10% of your final grade. You are welcome to collaborate with your peers while working through the problems; however, each student is expected to hand in their own original work for grading.

Assignment (and presentation):

After selecting a current topic of interest within the field of green chemistry, you will write a critical review of the recent advancements made in this area of research. You will use the principles of green chemistry and the metrics discussed in class to critique the recent research in your selected area. As part of this assignment, you will also be asked to formulate your own ideas for future research directions in this area. The grade for this assignment will be made up of several components (see below). Details on each will be provided on Blackboard.

- 5 pts - Topic selection/proposal
- 10 pts - Detailed outline
- 20 pts - Final paper
- 10 pts - Presentation

Course Participation:

A significant portion of your grade will come from your participation in the course. For the most part, this means making a *meaningful* contribution to class discussions; however, there are other ways of contributing that may also be considered when assigning your grade such as posing thoughtful questions during student presentations, or one-on-one exchanges via email or office hours (provided they demonstrate critical thought about the course material).

Since class discussions are unlikely to have been a major part of your previous chemistry courses, I want to make sure that you understand what I expect of you. Below is a sample rubric of how I will grade your in-class participation.

	Excellent	Needs Some Improvement	Unsatisfactory
Listening	Actively and respectfully listens to peers and instructor	Sometimes displays lack of interest in comments of others	Projects lack of interest or disrespect for others
Preparation	Arrives fully prepared having thoroughly read and thought about the assigned readings	Sometimes arrives unprepared or with only superficial preparation	Exhibits little evidence of having read or thought about the assigned readings
Quality of Contributions	Comments are relevant and reflect a deep understanding of the material and the remarks of other students	Comments are sometimes irrelevant, suggesting a lack of preparation, or lack of attention to previous remarks by students	Comments reflect little understanding of either the assigned readings or the remarks of others
Impact on Seminar	Comments frequently help move the conversation forward	Comments sometimes advance the conversation, but other times do little to move it forward	Comments do not advance the conversation or are actively harmful to it
Frequency of Participation	Actively participates at appropriate times	Sometimes participates but at other times is "tuned out"	Seldom participates and is generally not engaged

Final Exam:

There will be a 2-hour final exam written during the end of semester exam period. The exact date, time and location will be announced as soon as the registrar sets the schedule. The exam will cover material from the course, problem sets, as well as student presentations. The focus of the exam will be applying the knowledge learned in the course to analyzing and solving various

green chemistry problems. Each student will be allowed to bring a single page of notes (double-sided) to use as an aid.

Please note that if you miss the final exam, you must petition the Registrar's Office to write a make-up exam in the next formal exam period. Check the UTSC Calendar for instructions and deadlines.

Lecture Schedule (tentative):

Date	Lecture Topic	Course Work Due*
Sept 3 rd	Introduction to the course; the 12 principles of green chemistry	
Sept 10 th		
Sept 17 th	Green chemistry metrics; life cycle analysis	Assignment Proposal
Sept 24 th		Problem Set 1
Oct 1 st	The solvent problem (and some solutions!)	
Oct 8 th		Problem Set 2
Oct 22 nd	Catalysis	
Oct 29 th		Assignment Outline
Nov 5 th	Alternative reagents and methods	
Nov 12 th		Problem Set 3
Nov 19 th	Renewable feedstock chemicals	
Nov 26 th	--- Student Presentations ---	Assignment & Presentation

*Unless otherwise instructed, all graded work will be due at the start of lecture.

Texts:

There is no required text for this course; however, there are several recommended texts from which I will be assigning readings throughout the semester. These are all on reserve in the library for 3-hour short term loans. In addition, articles from the primary literature will be assigned as reading on a regular basis.

- 1) Anastas, P. T.; Warner, J. C. *Green Chemistry: Theory and Practice*; Oxford University Press: New York, 2000.
- 2) Lancaster, M. *Green Chemistry: An Introductory Text*; RSC: Cambridge, 2002. (Note: this text is also available online through the UTSC library website)
- 3) Tundo, P.; Perosa, A.; Zecchini, F. *Methods and Reagents for Green Chemistry: an Introduction*; Wiley: Hoboken, 2007.
- 4) Rothenberg, G. *Catalysis: Concepts and Green Applications*; Wiley: Weinheim, 2008.

Accessibility:

Students with diverse learning styles and needs are welcome in this course. In particular, if you have a disability/health consideration that may require accommodations, please feel free to approach me and/or the AccessAbility Services Office as soon as possible. I will work with you and AccessAbility Services to ensure you can achieve your learning goals in this course.

Enquiries are confidential. The UTSC AccessAbility Services staff (located in S302) are available by appointment to assess specific needs, provide referrals and arrange appropriate accommodations (416) 287-7560 or ability@utsc.utoronto.ca.

Academic Integrity:

Academic integrity is one of the cornerstones of the University of Toronto. It is critically important both to maintain our community which honours the values of honesty, trust, respect, fairness and responsibility and to protect you, the students within this community, and the value of the degree towards which you are all working so diligently.

According to Section B of the University of Toronto's Code of Behaviour on Academic Matters <http://www.governingcouncil.utoronto.ca/policies/behaveac.htm> which all students are expected to know and respect, it is an offence for students to:

- To use someone else's ideas or words in their own work without acknowledging that those ideas/words are not their own with a citation and quotation marks, i.e. to commit plagiarism.
- To include false, misleading or concocted citations in their work.
- To obtain unauthorized assistance on any assignment.
- To provide unauthorized assistance to another student. This includes showing another student completed work.
- To submit their own work for credit in more than one course without the permission of the instructor.
- To falsify or alter any documentation required by the University. This includes, but is not limited to, doctor's notes.
- To use or possess an unauthorized aid in any test or exam.

There are other offences covered under the Code, but these are by far the most common. Please respect these rules and the values which they protect. Offences against academic integrity will be dealt with according to the procedures outlined in the Code of Behaviour on Academic Matters.

Turnitin.com:

Normally, students will be required to submit their course essays to Turnitin.com for a review of textual similarity and detection of possible plagiarism. In doing so, students will allow their essays to be included as source documents in the Turnitin.com reference database, where they will be used solely for the purpose of detecting plagiarism. The terms that apply to the University's use of the Turnitin.com service are described on the Turnitin.com web site.
